

TOBY CRUST

AI ENGINEER — LLM AGENTS • WORKFLOW AUTOMATION • INTERNAL TOOLING

Sydney, AU +61 425 843 487 tobycrust@gmail.com toby-crust-portfolio.vercel.app [LinkedIn /toby-crust](https://www.linkedin.com/in/toby-crust)

Software engineer building **LLM agents and workflow automation** that do real work for a team: an agent that turns Slack requests into tested pull requests, and Convai-powered conversational characters in a government AR app. Backed by three years of **full-stack** (Python, React, TypeScript) and **real-time** (Unity, C#) shipping for SaaS, government and nonprofit clients.

SELECTED WORK

SLIK • AI & INTERNAL TOOLING

Slack-to-VM AI Agent & Testing Pipeline

Built an internal AI automation pipeline integrated with Slack to speed up development and non-dev workflows. Non-technical team members specify requested project changes directly in Slack, which dispatches to an AI agent that provisions a virtual machine, applies code changes, executes test suites, and alerts me for final PR review and merge. Drastically cut routine work and accelerated overall team shipping velocity.

Python AI Agents Slack API VM Automation GitHub Actions Automated Testing CI/CD

SLIK • NORTHERN TERRITORY GOVERNMENT

AR heritage app with conversational characters

Lead developer on a historical WWII AR app for the NT Government on iOS and Android, triggering on-site content via BLE beacons and geolocation, with Convai-powered conversational characters. Built with Unity Addressables to keep the download small and ship new content without a full release. Further locations are in production now, due to the success of the first.

Unity C# Convai AR Foundation BLE beacons Addressables

SLIK • R&D

Holo Box: ML head tracking for a volumetric display

Holographic display that tracks the viewer's head with machine learning and renders through an off-axis frustum, so perspective follows the viewer and a flat screen reads as real depth.

EXPERIENCE

Dec 2025 – present

Slik — Software Engineer, Sydney

- Built custom internal Slack-to-VM AI agent workflows to automate stakeholder requests, code modifications, and testing pipelines.
- Automated content and data pipelines with GitHub Actions and DigitalOcean Spaces.
- Lead developer on the NT Government AR app, from Unity build through to App Store Connect and Play Console release.

Oct 2024 – Oct 2025

Fabra — Software Engineer, Sydney

- Wrote internal tooling that cut manual steps out of the team's day-to-day backend operations.
- Took over a departing senior engineer's workstream and shipped share-design permissions and email validation end to end, front and back.
- Built features across Fabra's core SaaS product in React and TypeScript.

Feb – Oct 2024

Bardon Design — Junior Software Engineer, Bangkok

- Worked with the Louis Vuitton team on a gamified e-commerce experience built to lift engagement through interactive shopping.
- Built an interactive AR furniture selection app.

Summers, 2021 – 2023

Software internships — Auckland

- Built an AR Rube Goldberg machine level for GeoArGames, and a 2D arcade game embedded in the Yuri&Niels site.

SIDE PROJECTS

TickyTick assistant — LLM with a human in the loop

Gemini function-calling assistant in my task manager: the model only proposes changes, which the app validates and shows for review before saving.

Gemini Function calling Prompt caching

Hexapod robot — robotics

Six-legged walking robot: Arduino firmware with inverse kinematics, driven over WiFi from a three.js leg editor through a Python bridge.

Python C++ three.js ESP8266

TOOLKIT

LANGUAGES

Python
